

**BEFORE THE LEGISLATURE OF THE
STATE OF NEW YORK**

IN RE NEW YORK BILLS

**DECLARATION OF KENNETH
STEVENS, MD**

I, Kenneth Stevens, declare the following under penalty of perjury.

1. I am a doctor in Oregon where physician-assisted suicide is legal. I am also a Professor Emeritus and a former Chair of the Department of Radiation Oncology, Oregon Health & Science University, Portland, Oregon. I have published articles in medical journals and written chapters for books on medical topics. This has been for both a national and international audience. I work in both hospital and clinical settings. I have treated thousands of patients with cancer.

2. In Oregon, our assisted suicide law applies to patients predicted to have less than six months to live. I write to clarify that this does not necessarily mean that patients are dying.

3. In 2000, I had a cancer patient named Jeanette Hall. Another doctor had given her a terminal diagnosis of six months to a year to live, which was based on her not being treated for

cancer. I understand that he had referred her to me.

4. At our first meeting, Jeanette told me plainly that she did not want to be treated and that was going to "do" our law, *i.e.*, kill herself with a lethal dose of barbiturates. It was very much a settled decision.

5. I, personally, did not and do not believe in assisted suicide. I also believed that her cancer was treatable and that her prospects were good. She was not, however, interested in treatment. She had made up her mind, but she continued to see me.

6. On the third or fourth visit, I asked her about her family and learned that she had a son. I asked her how he would feel if she went through with her plan. Shortly after that, she agreed to be treated and she is still alive today. Indeed, she is thrilled to be alive. It's been fifteen years.

7. For Jeanette, the mere presence of legal assisted suicide had steered her to suicide.

8. I also write to clarify a difference between physician-assisted suicide and end-of-life palliative care in which dying patients receive medication for the intended purpose of relieving pain, which may incidentally hasten death. This is the principle of double effect. This is not physician-assisted suicide in which death is intended for patients who may or may not be dying anytime soon.

9. Finally, I have been asked to comment on generally accepted medical practice regarding the administration of prescription drugs to a patient.

10. Generally accepted medical practice allows a doctor, or a person acting under the direction of a doctor, to administer prescription drugs to a patient. Common examples of persons acting under the direction of a doctor, include: nurses and other healthcare professionals who act under the direction of a doctor to administer drugs to a patient in a hospital setting; parents who act under the direction of a doctor to administer drugs to their children in a home setting; and adult children who act under the direction of a doctor to administer drugs to their parents in a home setting.

Signed under penalty of perjury, this 6th day of January, 2016.

Kenneth Stevens, Jr., MD
Sherwood, Oregon
